Mimecast and Rapid7

Integrate security tools and processes, automate routine tasks and accelerate your security operations: Respond faster and strengthen cyber resilience.

Mimecast email security data and controls integrated with Rapid7 InsightConnect, a Security Orchestration, Automation and Response (SOAR) solution, enables security teams to work smarter, respond faster, and strengthen cyber resilience.

Combined, the two solutions:

- Allow organizations to realize the full benefit of SOAR investments.
- Rapidly respond to email security needs from a single interface.

Rapid7 InsightConnect is a security orchestration and automation solution that enables teams to accelerate and streamline time-intensive processes with little to no code. With 270+ plugins to connect tools and easily customizable connect-and-go workflows, InsightConnect frees up security teams to tackle other challenges, while still leveraging their expertise when it's most critical.

Email remains a primary attack vector and the front line of incident detection, response and remediation, so integration is vital across your tech stack. Without it, organizations remain unable to realize the full benefit of SOAR investments, such as efficiently updating protection at the gateway based on Indicators of Compromise (IoCs) identified elsewhere in the infrastructure.

Integrating Mimecast email security data and controls with Rapid7 InsightConnect addresses this clear need to improve cyber resilience and improve ROI by making more efficient use of limited security resources.

Key Benefits

- Easy integration adds Mimecast controls to the Rapid7 InsightConnect solution in minutes.

- Drive resource efficiency by ensuring security automation includes routine email tasks.

- Work smarter by including email security controls and actions within workflows.

- Reduce risk by making it easy to apply Mimecast email security actions across email and Active Directory.

- Increase Mimecast and Rapid7 InsightConnect ROI by giving security teams access to a more complete SOAR platform.

Rapid7 InsightConnect | Mimecast Integration Automated Functions:

- **Block Sender:** Prevent email delivery from known or specified malicious senders.
- **Permit Sender:** Allow email receipt from trusted senders.
- **Block Domain:** Prevent email delivery from known or specified malicious domains.
- **Permit Domain:** Allow email receipt from trusted domains.
- **Get Managed URLs:** Retrieve a list of all the currently managed URLs in the system.

Challenge Security teams have a plethora of tools and limited resources when responding to security incidents. Teams struggle to respond quickly while also updating security policies across the entire technology stack, especially when it comes to the number one attack vector, email.

Solution Integrating Mimecast with Rapid7 InsightConnect by a simple click, gets organizations up and running in minutes via the pre-built API plugin, to give joint customers:

- Stronger cyber resilience
- Faster response times
- Full realization of SOAR investments
- Consistent, up to date security protection

Challenge Email remains the most used business application, so it's important that IT manage it to keep employees productive and safe. With limited IT resources, tasks, like managing URL lists, retrieving messages, and tracking an email, takes time away from IT's more important initiatives.

Solution Quickly integrate Mimecast and InsightConnect to simplify key email security and management actions.   From a single interface, teams have access to a broad scope of actions to save time needed to manage email across the organization.

About Rapid7

- Organizations around the globe trust Rapid7 technology, services, and research to help them securely advance.
- The visibility, analytics, and automation delivered through the Insight cloud simplifies the complex and helps security teams reduce vulnerabilities, monitor for malicious behavior, investigate and shut down attacks, and automate routine tasks.
- Over 7,900 customers rely on Rapid7 technology, services, and research to improve security outcomes and securely advance their organizations.

About Mimecast

- Cloud-based cyber resilience platform that makes email safer for business.
- Fully integrated email security, archiving, and continuity for comprehensive email and risk management.
- Reduce risk, complexity, and cost of protecting email with a single platform that connects into your existing security ecosystem.
- Protects over 33,000 global customers against sophisticated attacks, spam and malware, and data leaks.
